November 27, 2017

Project title: Obesity Induced Changes in Gene Expression

Group partners: Shane Davitt, Bhavana Palakurthi, Lindsayeg Serene

Scripting Language: R

Teaching Assistant: Ann Raiho

Tasks due prior to class, 29 November 2017:

1. Use BLAST to identify the genes encoded by the 6 differentially expressed transcripts listed in uniquetranscripts.fasta (*Lindsay*)
2. Search the NCBI protein database (Nucleotide collection (nr/nt) Database) for amino acid sequences corresponding to these 6 transcripts (*Lindsay*)
3. Translate the 4 provided files of “RNAseq data”. Write a R script to translate nucleotide sequences into amino acid sequences (*Pseudocode by Shane and Bhavana*)

Tasks in class, 29 November 2017:

4. Translate pseudo code into R code. (*All three*)

Tasks due by the end of class, 1 December 2017:

5. Build a Hidden Markov Model for each of the 6 transcript proteins and search the 4 translated “RNAseq files”. (*Shane*)
6. Graph the “expression levels” of each protein in each of the “RNAseq files” (*Bhavana*)

Tasks due prior to class, 6 December 2017:

7. Documentation of the project plan. (*Bhavana*)
8. Further exploration 1: Examine how discontinuous megablast and blastn qualitatively change your table of BLAST hits. (*Shane*)
9. Further exploration 2: Explore the effects of phylogenetic relatedness of amino acid sequences on the performance of the HMM mode. (*Shane*)

Tasks in class, 6 December 2017:

10. Compare and discuss the code for translating RNAseq data and choose the best and efficient code. (*All the three*)
11. Peer review of the code. (*All the three*)

Tasks due prior to class, 8 December 2017:

12. Make changes as per discussion and peer review on the final code. *(All the three)*
13. Comment collectively on the final code for all the sub-problems. *(All the three)*
14. Final check to make sure all the files are uploaded to github by Thursday, December, 7. *(All the three)*

Tasks due before deadline, noon of 8, December 2017:

15. Submission of the url for the github repo for the group project emailed to TA. *(Lindsay)*
